‘BIG DATA’

A scuba diver in a red swimsuit and pink fins is swimming horizontally over a vibrant coral reef. The water is clear and blue, with sunlight filtering through from above. The diver is positioned in the upper right quadrant of the frame, moving towards the left. The coral reef below is diverse and colorful, with various types of coral and some small fish visible.

Spoken document retrieval

1998-2010

Improve quality of Dutch ASR for searching

Segmentation & who speaks when

When is ASR quality good enough for searching?

Audiodatabank

Op deze pagina is een bescheiden begin gemaakt met de presentatie van geluidsmateriaal (onder andere documentaires en interviews) waarin Willem Frederik Hermans aan het woord is. De bestanden zijn doorzoekbaar gemaakt met een combinatie van **technieken** die in Nederland nog niet vaak is toegepast. Klik [hier](#) voor hulp bij het zoeken.

ASR availability for TV news and current affairs per year

Visualising the archive: <https://sites.google.com/beeldengeluid.nl/stats-beeldengeluid-nl>

How complete are the metadata fields?

The Media Suite allows you to see how complete a metadata field is - for how many of the available docs this completeness over time. Here, we go one step further and compare multiple metadata fields.

Write your own (Python) code to analyze the data in the Media Suite

Comparing metadata field over time for different fields

Imagine if we want to use information from two metadata fields over time. Then we need to be sure that both fields are present in the time frame we are interested in

Example - NISV archive: Plotting the completeness of genre at the levels of series, season, programme, segment

```
In [25]: # get the values over time for each metadata level
# must specify date interval, as otherwise lines won't match between queries
collection = "nisv-catalogue-sqgr"
dateField = "bg:publications.bg:publication.bg:sortdate"
minDate = "01-01-1800"
maxDate = "31-12-2050"
# specify labels for the different fields
labels= ["series genre", "season genre", "programme genre", "segment genre"]
# specify the fields
fields = ["bga:series.bg:genres.bg:genre", "bga:season.bg:genres.bg:genre", "bg:genres.bg:genre", "bga:segment.bg:genre"]
# plot the graphs
showMetadataCompletenessOverTimeForFields(fields, labels, dateField, collection, minDate, maxDate)
```

CROWDSOURCING

The screenshot shows the homepage of the Waisda? Video Labeling Game. The browser address bar shows <http://waisda.nl/>. The page features a navigation menu with links for 'Welkom, maarten', 'home', 'profielpagina', 'over Waisda?', 'hoe werkt het?', 'volg @waisdaspelers', 'tip een vriend!', and 'uitloggen'. The main heading is 'Waisda?' with a logo of a TV and two people. Below the heading, there are instructions: 'Kies een video.', 'Vul woorden in die omschrijven wat je ziet en hoort.', and 'Je scoort punten als jij en iemand anders tegelijkertijd hetzelfde woord invullen.' There are four video thumbnails, each with a play button and a '1 speler' indicator. The first video is 'Boer zoekt vrouw (nog 16 min)', the second is 'Barend&Van Dorp (1998 - 1999) afl.43 (nog 21 min)', the third is 'De Wandeling (nog 17 min)', and the fourth is 'Barend&Van Dorp (1998 - 1999) afl.61 (nog 20 min)'. Each video has a 'Speel mee!' button. At the bottom, there are four leaderboards: 'Waisda? helden', 'Eendagsvliegen', 'Hoogste treffers', and 'Actiefste kloppers'. Each leaderboard lists the top players and their scores.
