

Solutions for streaming video delivery

Boy van Dijk

Solutions engineer and
technical writer

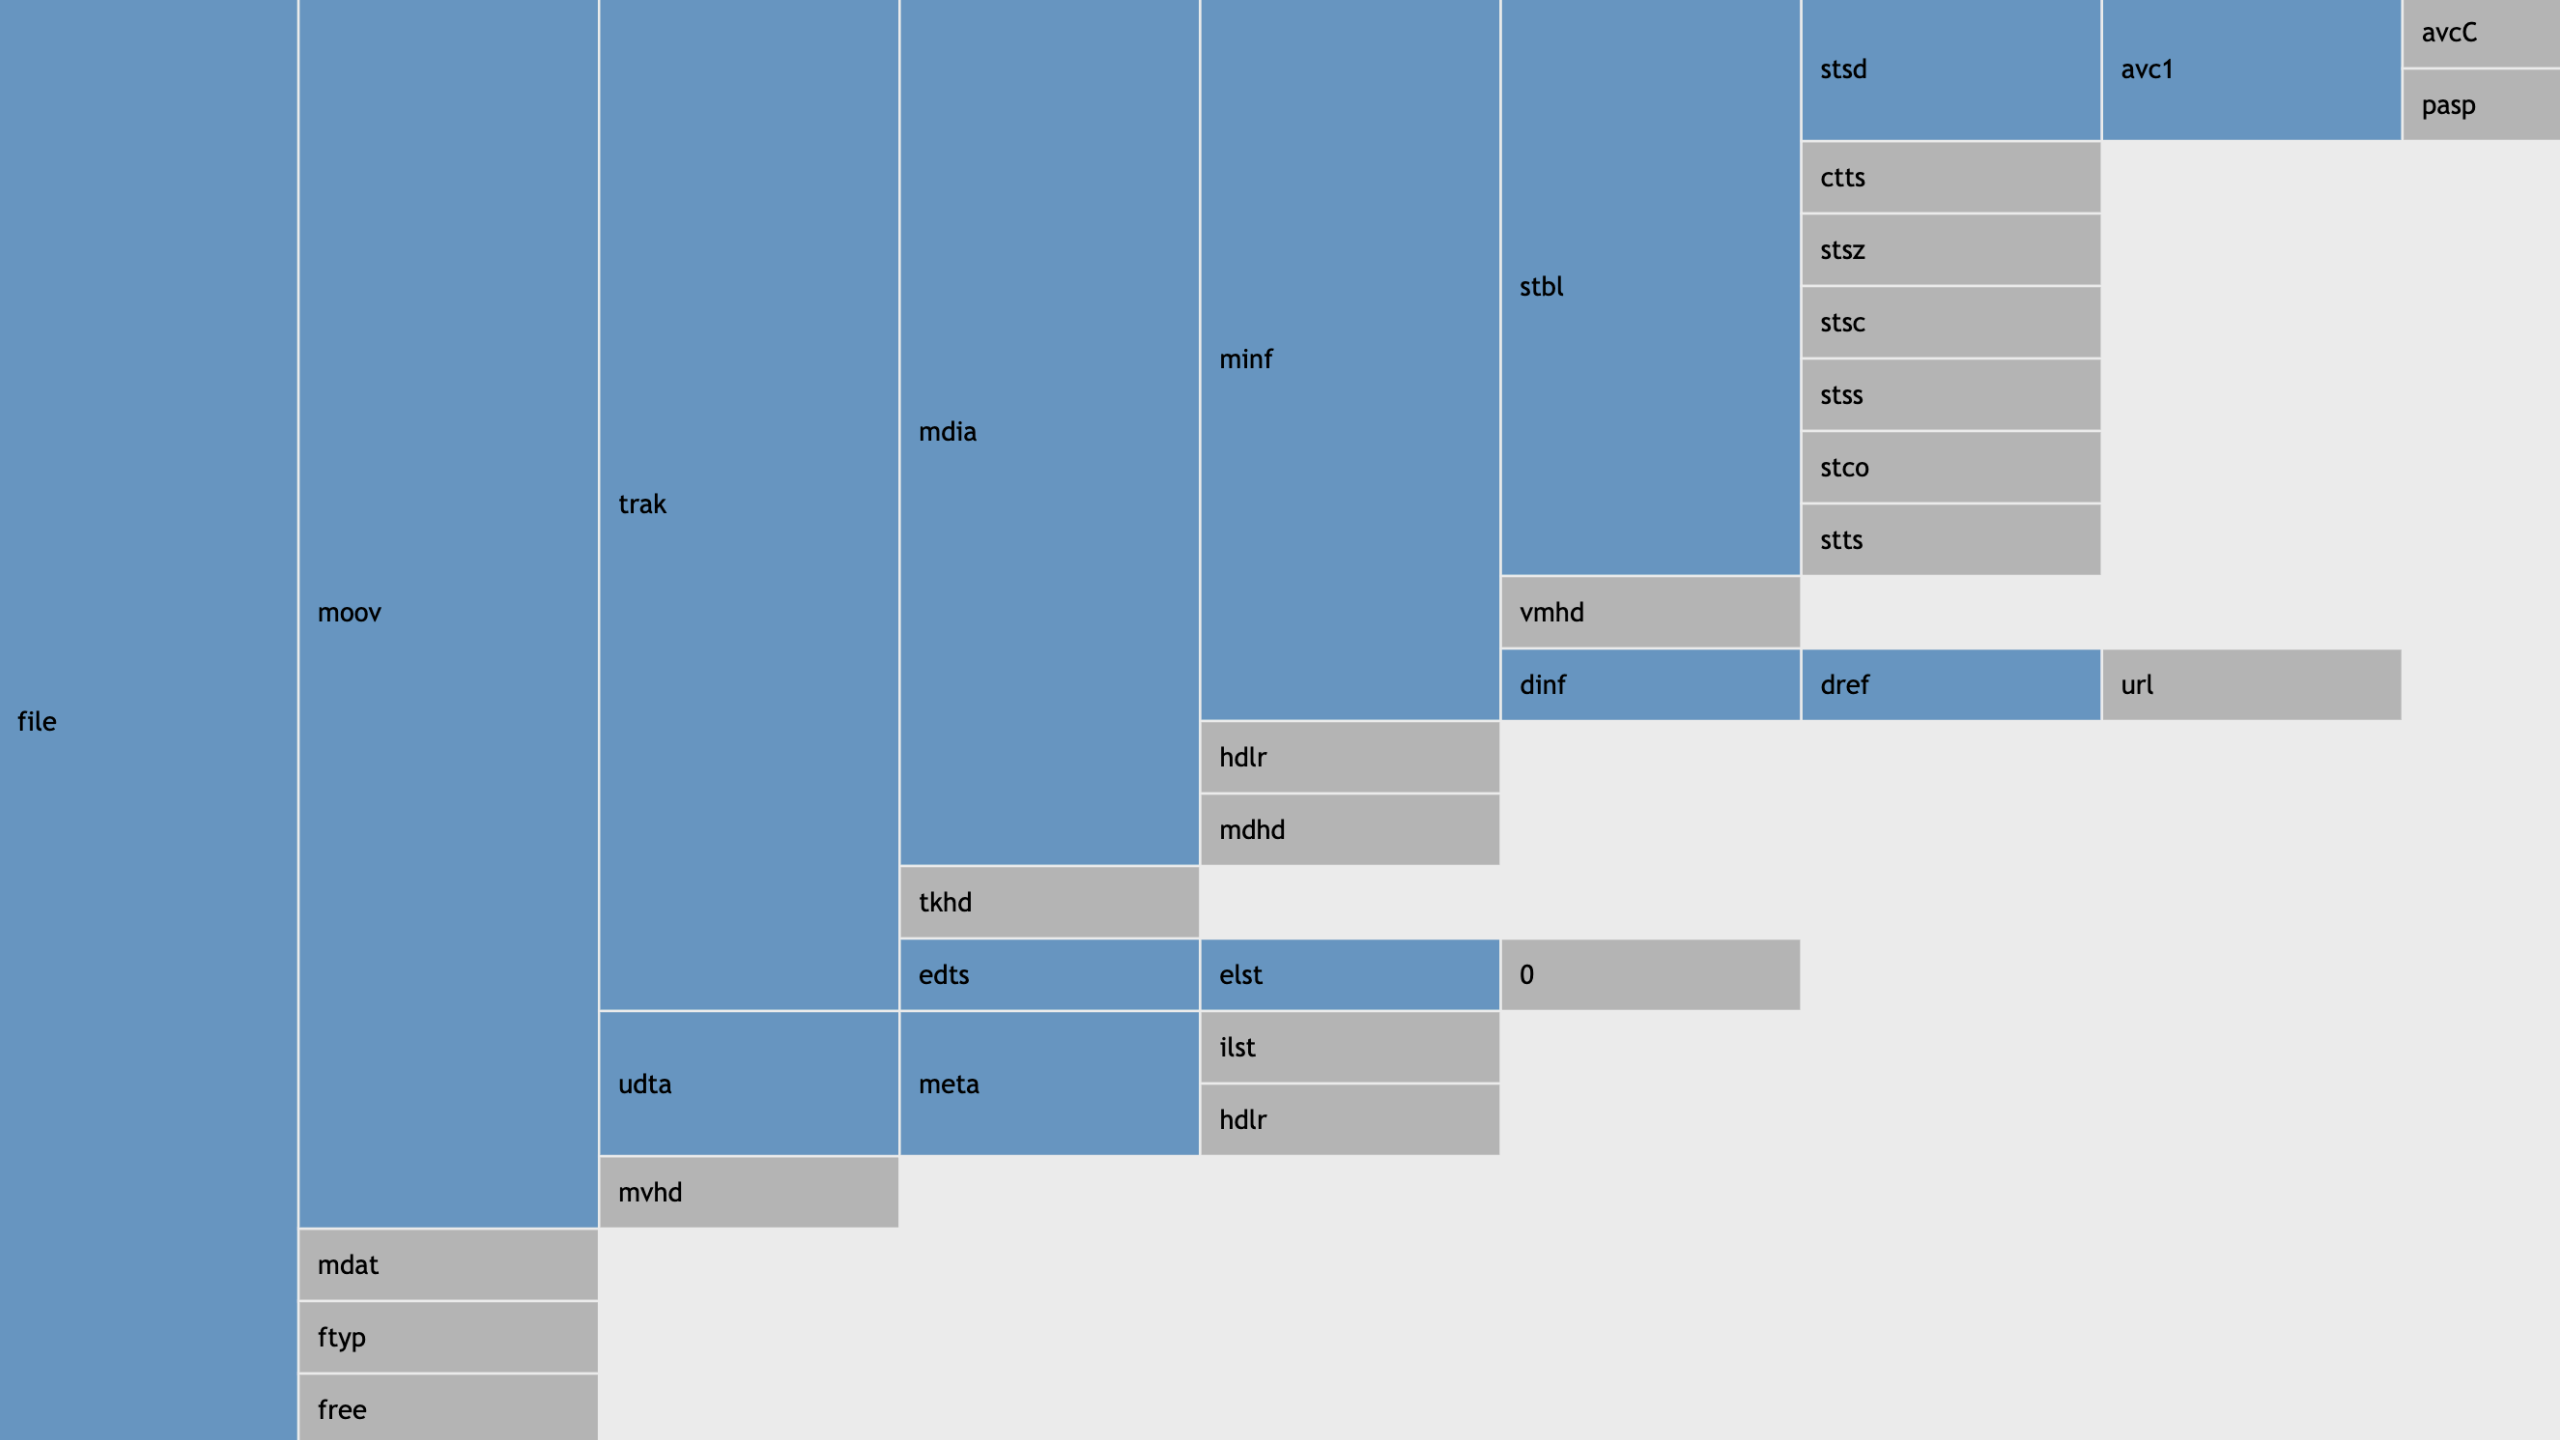

A man and a woman are shown in profile, wearing large headphones. The man is on the left, looking at a laptop. The woman is on the right, looking at a tablet. The background is dark and out of focus, suggesting a professional or office environment.

Optimizing MP4

For large scale, dynamically packaged, on-demand delivery of remotely stored content

mp4split

Boxes inside an MP4 where its 'index' can be stored

✓ Moov (progressive MP4)

✓ Mfra (Microsoft Smooth Streaming)

✓ Sidx (CMAF)

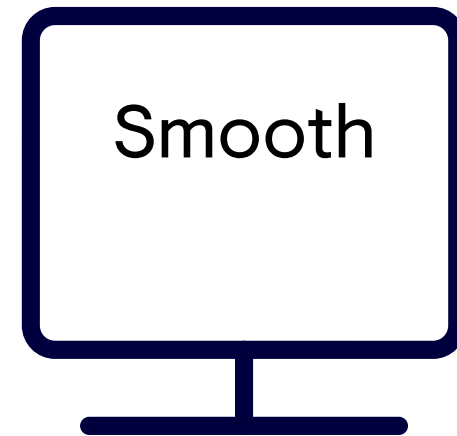

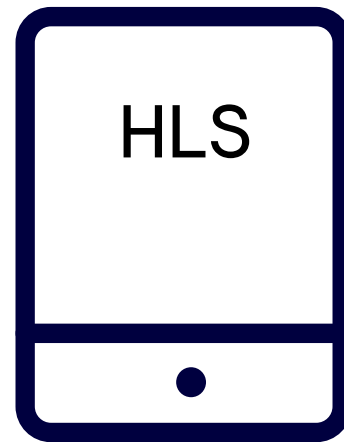

Middleman

dref MP4

data reference

Just-in-time packaging: from one source to all formats

Just-in-time packager
+
Remote storage

Unified Origin

Stream any format

So...

How do dref MP4's help?

Latency

Remote storage of large video libraries

- ✓ Relatively cheap

- ✓ High throughput

- ✓ 'Infinite' storage

Microsoft Azure
Blob Storage

Longtail

S3

GET

Origin

GET

CloudFront

GET

Customers

Stateless

Solution:
Efficient caching

Remote source

- ▷ Contains media data
- ▷ Heavyweight
- ▷ Inefficient to cache

dref MP4

- ▷ References media data
- ▷ Lightweight
- ▷ Efficient to cache

Choose your own caching solution

✓ NGINX

✓ Apache

✓ Varnish

✓ Other

How small?
Tens of MB's
for a full movie

Average request time (Unified Origin)

No caching

- ▷ MPD: ~1160 ms
- ▷ Init: ~184 ms
- ▷ Media: ~240 ms

Cached dref MP4

- ▷ MPD: ~16 ms
- ▷ Init: ~13 ms
- ▷ Media: ~160 ms

Other research:
+10 – 20% throughput

Finally: some of our other use cases for dref MP4's

- ✓ On-the-fly conversion of fragmented to progressive MP4 (Origin)

- ✓ On-the-fly content stitching (Remix)

- ✓ On-the-fly interleaving of Timed Metadata (Remix)
